*First step to programming since 14 years old with HTML then Java.*

*Powerful Shell user with Zsh as my main shell, and Arch Linux as my desktop.*

*Prefer to use server-less HTML5 for lightweight front-end programming, python/bash for scripting and C/C++ for everything else.*

*I like to focus on enterprise/developer oriented back-end development and sysadmin.*

*FOSS contributor who prefer to write patches rather than reporting bugs.*
